LOW PROFILE KIT INSTALLATION GUIDE

Step 1: Removing the original full-height bracket

- Dissipate any static from yourself by touching the metal siding on your chassis
- Remove all the mounting screws from the original full height bracket
- You should keep the removed bracket for future use, if necessary

---

Step 2: Choose the right bracket to install

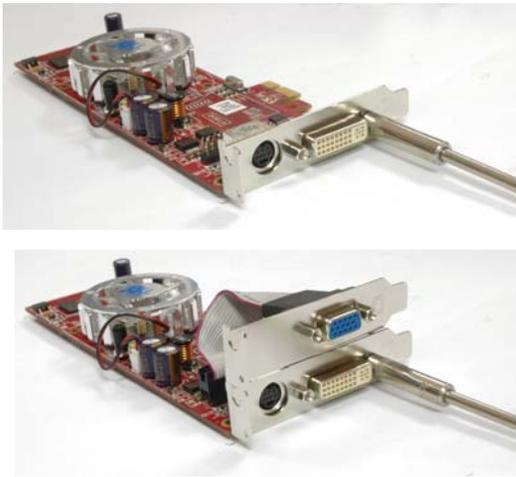

BKT-S8M2NT	BKT-GE44NT

BKT-SB22NT	BKT-R7B2NT

- Check the output ports of the HIS video card and match it with the corresponding low-profile bracket

- If the (S-Video/DVI) + (D-Sub) bracket configuration is to be used, the card will need to be fitted with the extended VGA ribbon cable

Step 3: Installing the low-profile bracket

- Fit your selected bracket onto the card
- Screw up the screws that you have removed previously
- If you are using the (S-Video/DVI) + (D-Sub) bracket, make sure to screw up both the DVI and VGA ports

---

Step 4: Install the card back to your computer

- Install the card in your computer
- Power on the computer and install the driver and utilities using the HIS driver CD supplied
- You are done!
